

DCI McKesson S-Series Surgical Vacuum

An effective way to produce quiet, efficient suction without the costly use of water.

The S-Series Dry Vacuum is a completely water and oil-less design. That means no more checking oil levels or costly water bills.

The S-Series system is among the most user and technician friendly surgical vacuums in the industry. Each component was chosen with performance and reliability in mind to ensure years of safe and dependable service. Our vacuum pumps deliver more vacuum flow per horsepower than many competitive models. This results in higher performance, less energy consumption, and longer service life.
